Full stack engineer @ Marple

About us

Marple is a startup based in Antwerp, Belgium. We are a product-focused company, building visualisation software for large time series datasets.

Our customers are top engineering teams that win motorsport championships, develop electrical planes, design new electrical engines and make hyperloop a real thing in Europe.

What we expect from you

Non-negotiable

- Full-time position
- 3 days / week present at the office in Antwerp

- You have experience in coding non-trivial things (the kind where you need to think 4 hours to write 5 lines)

Things that we like, but are not required

- Experience with Python, React, PostgreSQL, Linux, Docker, AWS or Kubernetes
- Good development hygiene (small pull requests, unit testing, pure functions, ...)
- A degree in computer science, maths or other science/engineering fields
- You have shipped a product before (can be small)
- You speak Dutch

What makes us different

Many companies claim this, but we actually do it

- Insanely fast prototyping & iterating (shipping 29 full releases last year)
- You'll have ownership in getting product features from idea to implementation
- We take code reviews very serious - everybody learns this way
- Your voice is equally heard in the dev team, regardless of seniority
- High quality standards for clean code
- We don't work a crazy amount of hours and take decent breaks

Also, performance is a continuous challenge in our product. A typical use case has datasets at 200Hz, 2000 channels, for 1 hour. That means that one such dataset contains 1.4B data points. We allow visualising multiple of these - all the while keeping the UI experience smooth. This makes coding new features certainly not easy, but very interesting.

What we offer

We make an offer adjusted to your experience

- Competitive salary with benefits
- Equity (ESOP)
- Flexible approach to paid time off
- An awesome office on the 8th floor with a view on the Schelde

We are not sponsoring EU/Belgian Visas.

Interested or questions?

For any questions don't hesitate to get in touch with our tech lead Nero Vanbiervliet.
